

## Trilingual graduate engineer

### THE COMPANY

MCE-5 DEVELOPMENT is an independent technology incubator whose purpose is to transfer innovative powertrain technology from research to industry, to make motor vehicles automobiles more energy efficient and environmentally friendlier. To do so, MCE5 implements four key processes: identifying and qualifying innovative concepts; developing them to the intermediate levels of industrial maturity; commercializing them through cooperation, intellectual property and know-how transfer agreements; financing research and development investments.

MCE5 research focuses on two strategic directions: on the one hand, ultra-efficient internal combustion engine; on the other hand, ultra-clean hybrid powertrain.

MCE5 has thus developed the VCRi technology, becoming a world reference in the field of compression ratio variation for automotive engines. This technology is currently being developed in cooperation with a major Chinese car manufacturer to equip engines of its brand. China's automotive market has become the world's largest market in volume. It is therefore a prime target for prospecting new customers. This is why the exchanges between MCE5 and Chinese players in the automotive industry are becoming more intense.

Founded in Lyon in 2000, the Company is supported by more than 700 private investors and numerous French and European public institutions.

### JOB DESCRIPTION

Reporting to the Program Manager, the trilingual engineer is a key person in the strategic relationships with our clients, which are necessary for the success of the programs.

The prospection conducted by the Business Development Department and the management of the development programs conducted by the Research and Development Department require daily oral and written communications with people of Chinese culture, on the one hand; in English with certain partners, on the other hand. To be effective, these communications must comply with intercultural specificity. That is why the trilingual engineer will have the main mission to support MCE5 in its relations and oral and written communication, especially with its customers and prospects in China, namely:

- Understanding MCE5 stakes
- Adapting to the Chinese culture rationale and analysis presented in technical reviews and related documents formats
- Translating documents into Chinese and English languages
- Attending meetings involving Chinese participants and present documents in Chinese language
- Translating comments and questions from Chinese participants into French and / or English, in order to convey the explicit and implicit messages to participants

### CANDIDATE'S PROFILE

- Trilingual French / Mandarin Chinese / English
- Ideally technical education with international experience
- Knowledge in the field of automotive industry (issues, development process)
- Ability to write technical documentation

### SKILLS FOR THE JOB

- Mastery of intercultural Franco-Chinese relationships
- Customer-oriented scientific approach
- Team work
- Self-reliance
- Interpersonal relationship skills

Regular international travel are expected
